News. "We're moving in different directions." The source continues: "They're both really happy and they'll always be best friends, but they're different people and they're growing apart. They're really happy, but they're happy in different ways." Sources tell E! News that the split is amicable and amicable, with the reality stars on good terms. As for what's next for the "Real Housewives" stars, a source close to them told us that "there's no reason for either of them to get back together." As for the rumors that Bravo was considering recasting Camille and Dina's friendship,

sources say that's no longer in the cards. As we've reported, the network is looking to close out the current season of "The Real Housewives of Orange County" on a high note. "It's so good that it feels like the end," a source close to the situation tells E! News. "They're filming the finale in Hawaii next week, so it's really exciting."Project Summary and Abstract The goal of this research is to develop and test novel DNA-based barcoding probes and primers to enable direct identification of species-level insect samples. The development of methods for direct species-level identification of insects is essential for many applications of biodiversity studies, including biodiversity assessments, pest management and assessment of biological invasions. Much of this work has been facilitated by the introduction of molecular sequencing technologies, which have revolutionized the field of taxonomy. These new technologies, however, are expensive and time-consuming, preventing broad implementation in many public health and conservation settings. In this proposal, we aim to develop new DNA-based methods for accurate species-level identification of insects, specifically focusing on those insects that are most problematic for analysis, including medically significant species and those that are used in biological and chemical studies. Our goal is to develop a system that is simple, fast, accurate, and portable 82157476af
